

Environmental Policy Statement

CBM recognise the influence between building industry and the environment, managing the environment being a necessity for future works and life style.

CBM aim to develop our environment Policy to keep an active response towards all current legislation with regard to the environment and make all concerned aware of CBM policy needs.

CBM Principles:

- The management is committed to educate and train all employee's Contractors and Suppliers and train in an environmental responsible manner.
- The management is to monitor all activities towards the environment as part of our policy in decision making and update as necessary.
- To develop and maintain, an active and effective, Waste Management System.
- To promote and develop, a more effective and efficient way of carrying out our operations and duties.
- To promote the efficient use of energy and material resources.
- CBM to be responsive to environmental incidents.
- To liaise closely with all regulatory bodies and authorities involved with environmental issues.
- To have an active policy to support the research of CBM works and activities towards best practice environmental issues and are committed to continual improvement.

Operational Management Plan

CBM are aware that within the building trade, materials and buildings need to address the impact that this trade has on the environment.

We have identified a number of areas for improvement and our environmental policy aims to prioritise these issues to achieve improvement.

CBM policy towards the environment is to adopt best guidance practice towards the impact on the environment including a site waste management plan.

Training:

The management is committed to educate and train all employees, contractors and suppliers to be active towards the environmental policy and all its requirements.

Training will be achieved through tool-box talks, Specialists training, Web-site information and electronic up-dates from environmental bodies.

Training will be on best adopted practices towards;

- 1; Waste disposal
- 2; Water discharges
- 3; Land contamination
- 4; Noise pollution
- 5; Air emissions
- 6; Material source

Monitoring/Material Sourcing.

The management is to monitor the building environment as part of our policy decision making.

To develop and maintain an active and effective Waste management system.

Materials to be sourced where applicable from managed suppliers that adhere to strict environment guide lines.

They must source 5% of timber from FTS registered or must be an FTS registered company.

Where applicable materials will be from managed suppliers.

CBM will where applicable source material to have a low impact on the environment, we will ensure this by sourcing from managed suppliers that adhere to strict environmental guide lines.
